### NEWS

Homework will be given on Fridays and is to be turned in by the following Friday.

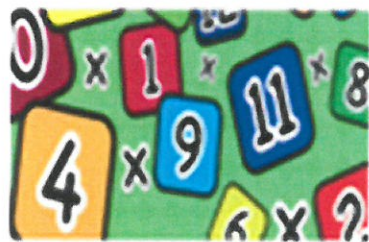

#### Early release

Friday -September 29  
@ 2:10

Value of the Week:  
Caring

### Math

Please review multiplication facts with your child. Many of the students do not know them...

## OUR LEARNING

### Southwest Region

This region stretches from the Gulf of Mexico to the Colorado River in Arizona. Mexico borders the region on the South. This region has many different kinds of landforms. It has vast plains, beautiful canyons and plateaus. Next week, we will be studying the West Region.

### Science

This week, the students were learning about how rivers shape the land. The students worked in groups with stream tables poured water on one end which formed rivers which ran from one end of the stream table to the other. This experiment showed how soil is moved and deposited downstream.

### Math

In math, order of operations has been a major topic. For example, if you encounter a number sentence which part of the equation do you start with? You start with things in parenthesis, then multiplication and division, and addition and subtraction last.
